

1. Programme title	MMath (Hons) Mathematics
2. Awarding institution	Middlesex University
3. Teaching institution	Middlesex University
4. Programme accredited by	
5. Final qualification	MMath
6. Year of validation Year of amendment	
7. Language of study	English
8. Mode of study	Full Time / Part Time / Thick Sandwich

9. Criteria for admission to the programme

Admission to the MMath Mathematics programmes will require 280 UCAS tariff points normally including a grade B in A-level Mathematics.

In addition Middlesex University general entry requirements apply as outlined in the university's regulation B2. Applicants whose first language is not English are required to achieve 6.0 in IELTS overall (with a minimum of 5.5 in each component) or an equivalent qualification recognised by Middlesex University. The equivalence of qualifications from outside UK will be determined according to NARIC guidelines.

The programme aims to

- provide a broad and comprehensive knowledge of core areas of pure and applied mathematics in a supportive teaching environment;
- provide an advanced understanding of specific areas of mathematics;
- stimulate an interest in all aspects of modern mathematics;

- prepare students for work as professional mathematicians either in academia or elsewhere;
- foster skills including problem solving, communication, team work and the ability to work individually on complex problems;
- develop an understanding of the processes of mathematics research and its importance.

11. Programme outcomes

A. Knowledge and understanding

On completion of this programme the successful student will have knowledge and understanding of:

1. core areas of pure mathematics including geometry, algebra, mathematical analysis and discrete mathematics;
2. core areas of applied mathematics including statistics, operational research and differential equations;
3. several specialised areas of advanced mathematics and its applications;
4. the development of contemporary mathematical theories and methods;
5. the correct use of mathematical language to express both theoretical concepts and logical argument;
6. the use of computers both as an aid and as a tool to study problems in mathematics.

Teaching/learning methods

Students gain knowledge and understanding through lectures, workshops and computer laboratory sessions where topics are introduced and explored thoroughly before moving forward.

Assessment methods

Students' knowledge and understanding is assessed by a combination of examinations, coursework assignments and presentations.

B. Cognitive (thinking) skills

Teaching/learning

On completion of this programme the successful student will be able to:

1. formulate problems in appropriate theoretical frameworks to facilitate their solution;
2. develop strategies to solve mathematical problems in a range of relevant areas;
3. construct logical arguments solving abstract or applied mathematical problems;
4. criticise mathematical arguments developed by themselves and others.
5. demonstrate advanced levels of critical understanding of current mathematics.

methods

Students learn cognitive skills through working in class, in groups or independently on designated problems and theoretical content under the guidance of staff.

Assessment methods

Students' cognitive skills are assessed formatively in class employing group and individual working sessions, and summatively using a combination of presentations, examinations and coursework. In particular B5 will be assessed during the level 7 project module.

C. Practical skills

On completion of the programme the successful student will be able to:

1. solve practical problems in a range of areas of mathematics;
2. determine the appropriateness of different methods of solving mathematical problems;
3. communicate mathematics effectively to a wide range of audiences;
4. use computer packages where appropriate to develop a deeper understanding of mathematical problems.

Teaching/learning methods

Students learn practical skills through a series of hands-on sessions throughout their studies designed to explore theoretical content more thoroughly.

Assessment methods

Students' practical skills are assessed formatively in class employing group and individual working sessions, and summatively using a combination of

	presentations, examinations and coursework.
<p>D. Graduate skills On completion of this programme the successful student will be able to:</p> <ol style="list-style-type: none"> 1. work effectively and constructively as part of a team; 2. motivate and communicate complex ideas accurately using a range of formats; 3. identify and benefit from opportunities for personal and career development; 4. work confidently and accurately with formulae and numerical information 5. learn effectively 	<p>Teaching/learning methods Students acquire graduate skills through contribution in class to group and individual work, and outside class through development of assignment work.</p> <p>Assessment methods Students' graduate skills are assessed using a combination of presentations, examinations and coursework.</p>

12. Programme structure (levels, modules, credits and progression requirements)

12.1 Overall structure of the programme

Level	Content			
4	MSO1110 Vectors and Matrices (30)	MSO1120 Calculus and Differential Equations (30)	MSO1130 Logic and Structures (30)	MSO1140 Data and Information (30)
5	MSO2110 Groups and Rings (30)	MSO2120 Mathematical Analysis (30)	MSO2130 Discrete Mathematics and Geometry (30)	MSO2140 Problem Solving Methods (30)
6 (TKSW mode)	MSO3800 Placement Year (120)			
6	MSO3110 Advanced Algebra (30)	MSO3120 Real and Complex Analysis (30)	MSO3130 Communicating Mathematics (15)	L6 Term 1 Option
			L6 Term 2 Option	L6 Term 2 Option
7 (MMath)	MSO4100 MMath Reading Course (30) and/or MSO4150 MMath Project (30)	MSO4200 Advanced Topics in Mathematics A (30)	MSO4250 Advanced Topics in Mathematics B (30)	L7 Term 1 Option
				L7 Term 2 Option

MMath Mathematics

L6 Term 1 Options: choose **one** from:

- MSO3310 Multivariate Statistics
- MSO3220 Differential Equations

L6 Term 2 Options: choose **two** from:

- MSO3140 Project,
- MSO3170 Combinatorics
- MSO3225 Functional Analysis
- MSO3510 Simulation and Decision Making

L7 Option: choose one module from each term. Term 1 Options

- MSO4310 Multivariate Statistics
- MSO4220 Differential Equations

Term 2 Options

- MSO4170 Combinatorics
- MSO4225 Functional Analysis
- MSO4510 Simulation and Decision Making

Level 4 (1)		
COMPULSORY	OPTIONAL	PROGRESSION REQUIREMENTS
Students must take all of the following: MSO1110 MSO1120 MSO1130 MSO1140		Students must pass all four level 4 modules to progress
Level 5 (2)		
COMPULSORY	OPTIONAL	PROGRESSION REQUIREMENTS
Students must take all of the following: MSO2110 MSO2120 MSO2130 MSO2140		In order to progress on the MMath students must normally pass all level 5 modules at grade 12 or better. Students not achieving this can continue on the BSc (Hons) Mathematics programme.
Level 6 (3)		
COMPULSORY	OPTIONAL	PROGRESSION REQUIREMENTS

Students must take all of the following: MSO3110 MSO3120 MSO3130	Students must choose one from: MSO3310 MSO3220 and two from MSO3140 MSO3170 MSO3510 MSO3225	Students must pass all four level 6 modules to progress.
Level 7 (4)		
COMPULSORY	OPTIONAL	PROGRESSION REQUIREMENTS
Students must take all of the following: MSO4200 MSO4250	Students must take 60 credits from the following modules MSO4100* (30) MSO4150* (30) MSO4170 (15) MSO4310 (15) MSO4510 (15) MSO4220 (15) MSO4225 (15) Including at least one of the modules indicated *.	

12.3 Non-compensatable modules (note statement in 12.2 regarding FHEQ levels)

Module level	Module code
7	MSO4100, MSO4150

13. Curriculum map

See attached.

14. Information about assessment regulations

Students on the TKS^W mode take a 12 month placement at the end of year 2. A dedicated Employability Advisor helps in the search for an appropriate employer and provides students with appropriate Placement. They also provide students with appropriate guidance and support in preparation for, during and after placement. The placement forms the basis for an assessed report based on the organisation. At the start of the placement students are allocated an individual supervisor who provides support and advice for the duration of the project.

Graduates of mathematics courses are employed as professional mathematicians in many organisations, for example GCHQ, where they work on solving abstract problems that directly influence government policy. Mathematics is also fundamental to many other sectors such as commerce, economics, computing, finance, and accounting.

The analytical and logical skills that maths students develop make them well suited to careers in areas such as law. Their ability to analyse and solve complex problems means they are sought after by employers and also demand some of the highest starting salaries.

- English Language Support
- Learning Resources
- Programme Handbook and Module Handbooks
- Induction and orientation programme
- Access to student counsellors
- Student e-mail and internet access

18. JACS code (or other relevant coding system)	G100
19. Relevant QAA subject benchmark group(s)	MSOR

20. Reference points

- QAA Guidelines for programme specifications
- QAA Qualifications Framework
- Middlesex University Regulations
- Middlesex University Learning Framework – Programme Design Guidance, 2012

Indicators of quality:

- Student achievement
- Buoyant enrolment
- Student feedback evaluation forms
- External examiners reports
- Student employability

Methods for evaluating and improving the quality and standards of learning are:

- External Examiner reports
- Board of Study
- Module evaluation and report
- Peer teaching observations
- Student evaluation
- Validation and review panels

See Middlesex university's Learning and Quality Enhancement Handbook for further information

Please note programme specifications provide a concise summary of the main features of the programme and the learning outcomes that a typical student might reasonably be expected to achieve if s/he takes full advantage of the learning opportunities that are provided. More detailed information about the programme can be found in the rest of your programme handbook and the university regulations.

Curriculum map for MMath Mathematics

This section shows the highest level at which programme outcomes are to be achieved by all graduates, and maps programme learning outcomes against the modules in which they are assessed.

Programme learning outcomes

Knowledge and understanding		Practical skills	
A1	core areas of pure mathematics including geometry, algebra, mathematical analysis and discrete mathematics.	C1	solve practical problems in a range of areas of mathematics.
A2	core areas of applied mathematics including statistics, operational research and differential equations.	C2	determine the appropriateness of different methods of solving mathematical problems.
A3	several specialised areas of advanced mathematics and its applications.	C3	communicate mathematics effectively to a wide range of audiences.
A4	the development of contemporary mathematical theories and methods.	C4	use computer packages where appropriate to develop a deeper understanding of mathematical problems
A5	the correct use of mathematical language to express both theoretical concepts and logical argument.		
A6	the use of computers both as an aid and as a tool to study problems in mathematics.		

Cognitive skills		Graduate Skills	
B1	formulate problems in appropriate theoretical frameworks to facilitate their solution.	D1	work effectively and constructively as part of a team.
B2	develop strategies to solve mathematical problems in a range of relevant areas.	D2	motivate and communicate complex ideas accurately using a range of formats.
B3	construct logical arguments solving abstract or applied mathematical problems.	D3	identify and benefit from opportunities for personal and career development;
B4	criticise mathematical arguments developed by themselves and others.	D4	work confidently and accurately with formulae and numerical information
B5	demonstrate advanced levels of critical understanding of current mathematics.	D5	learn effectively
