

Programme Specification and Curriculum Map for *MSc Financial Mathematics*

Middlesex
University
London

1. Programme title	MSc Financial Mathematics
2. Awarding institution	Middlesex University
3. Teaching institution	Middlesex University
4. Programme accredited by	
5. Final qualification	MSc Financial Mathematics / PgDip Financial Mathematics
6. Academic year	2014/15
7. Language of study	English
8. Mode of study	Full-time

9. Criteria for admission to the programme

An Honours degree normally classified 2.2 or above, or equivalent, with a significant mathematical element in its curriculum.

Successful applicants must have competence in English language. For international applicants whose first language is not English the requirement is that they have IELTS 6.5 (with minimum 6.0 in all four components) or TOEFL internet based 87 (with at least 21 in listening & writing, 22 in speaking and 23 in reading).

10. Aims of the programme

The programme aims to:

- develop awareness and understanding, at an advanced level, of financial mathematics concepts and techniques to enable them to understand and analyse financial data;
- develop an advanced knowledge of stochastic analysis and applied probability, mathematical modelling and analysis in order to solve problems in finance;
- develop the mathematical and financial skills needed to quantify and manage risk in the modern finance, investment and insurance industries.

11. Programme outcomes

A. Knowledge and understanding

On completion of this programme the successful student will have knowledge and understanding of:

- A1 the workings of a range of financial instruments;
- A2 various types of financial data;
- A3 theories and methods for portfolio selection and optimisation and their relative merits;
- A4 core concepts and theories of asset pricing and their relative merits;
- A5 a range of methods for measuring risk;
- A6 research methods and techniques.

Teaching/learning methods

Students gain knowledge and understanding through a combination of lectures, directed reading and guided independent study, including use of online resources, case studies, guest/visiting speakers, group work, coursework, critical reflection, facilitated discussion, workshops and the project.

Assessment methods Students' knowledge and understanding are assessed by individual and group coursework, seen exams and tests, and the project.

<p>B. Cognitive (thinking) skills</p> <p>On completion of this programme the successful student will be able to:</p> <p>B1 explain and evaluate methods for portfolio management;</p> <p>B2 explain and critically compare competing methods for asset pricing;</p> <p>B3 use advanced methods of stochastic analysis and applied probability to quantify and manage risk;</p> <p>B4 critically interpret and evaluate financial data;</p> <p>B5 effectively organise, structure and produce a project at an advanced level.</p>	<p>Teaching/learning methods</p> <p>Students learn cognitive skills through seminar discussion and debate, and independent study including the use of online resources supported by guidance from tutors.</p> <p>Assessment methods Students' cognitive skills are assessed by individual and group coursework, and by the project.</p>
<p>C. Practical skills</p> <p>On completion of the programme the successful student will be able to:</p> <p>C1 source and critique financial data from a range of different sources including electronic databases;</p> <p>C2 analyse financial data using both programming and computer packages;</p> <p>C3 use a variety of advanced models for portfolio management;</p> <p>C4 use stochastic calculus to analyse asset prices;</p> <p>C5 measure and evaluate risk in a variety of settings.</p>	<p>Teaching/learning methods</p> <p>Students learn practical skills through workshops, reinforced and extended through seminar presentations and discussion, individual and group work, and independent study</p> <p>.</p> <p>Assessment methods</p> <p>Students' practical skills are assessed by individual and group coursework, and by the project.</p>

12. Programme structure (levels, modules, credits and progression requirements)

12. 1 Overall structure of the programme

See page 12

12.2 Levels and modules

Starting in academic year 2010/11 the University is changing the way it references modules to state the level of study in which these are delivered. This is to comply with the national Framework for Higher Education Qualifications. This implementation will be a gradual process whilst records are updated. Therefore the old coding is bracketed below.

Level 7 (4)

COMPULSORY	OPTIONAL	PROGRESSION REQUIREMENTS
Students must take all of the following: MSO4110 MSO4112 MSO4160 MSO4180 MSO4311 MSO4991	Students must also choose one from the following: FIN4480 MSO4351 MSO4522	Students must pass 120 credits to progress to the project

12.3 Non-compensatable modules

Module level	Module code
	N/A

13. Curriculum map

See below.

14. Information about assessment regulations

Middlesex University Assessment Regulations apply to this programme, without exception.

15. Placement opportunities, requirements and support (if applicable)

16. Future careers (if applicable)

Graduates of the programme will be equipped for careers in financial product development, pricing, risk analysis and management, investment decision making, portfolio selection and optimisation, in investment banking, financial consulting, auditing, risk management and government.

17. Particular support for learning (if applicable)

- Specialise software and database resources
- Induction and orientation programme
- English Language Support and Numeracy support offered by the Learner Development Unit
- Access to student counsellors
- Virtual Learning Environment

--

18. JACS code (or other relevant coding system)	G130 70% N300 30%
19. Relevant QAA subject benchmark group(s)	Mathematics, Statistics and Operational Research

20. Reference points
<ul style="list-style-type: none">• QAA Guidelines for programme specifications• QAA Qualifications Framework• Middlesex University Regulations• Middlesex University Learning Framework – Programme Design Guidance, 2012

21. Other information

Please note programme specifications provide a concise summary of the main features of the programme and the learning outcomes that a typical student might reasonably be expected to achieve if s/he takes full advantage of the learning opportunities that are provided. More detailed information about the programme can be found in the rest of your programme handbook and the university regulations.

Curriculum map for *MSc Financial Mathematics*

Programme learning outcomes

Knowledge and understanding	A1	the workings of a range of financial instruments
	A2	various types of financial data
	A3	theories and methods for portfolio selection and optimisation
	A4	core concepts and theories of asset pricing
	A5	a range of methods for measuring risk
	A6	research methods and techniques
Cognitive skills	B1	explain and evaluate methods for portfolio management
	B2	explain and critically compare competing methods for asset pricing
	B3	use advanced methods of stochastic analysis and applied probability to quantify and manage risk
	B4	critically interpret and evaluate financial data
	B5	effectively organise, structure and produce a project at an advanced level
Practical skills	C1	source financial data from a range of different sources including electronic databases
	C2	analyse financial data using both programming and computer packages
	C3	use a variety of models for portfolio management
	C4	use stochastic calculus to analyse asset prices
	C5	measure and evaluate risk in a variety of settings
