Programme Specification and Curriculum Map for MSc Applied Clinical Health Psychology

1. Programme title
   Applied Clinical Health Psychology

2. Awarding institution
   Middlesex University

3. Teaching institution
   Middlesex University

4. Final qualification
   MSc

5. Academic year
   2016/17

6. Language of study
   English

7. Mode of study
   Full-time or part-time

9. Criteria for admission to the programme
   Students should normally possess a good honours degree in an appropriate subject area (such as psychology, health studies, counselling, mental health, nursing, public health etc.) which should include a research methods component. This should be a high 2:2 or better and particular consideration will be given to performance in undergraduate research methods modules and the dissertation. In addition to this, international students need to have obtained a minimum IELTS score of 6.5.

   Accreditation of Prior and Experiential Learning (APEL): Applicants who have extensive learning from experience, learning achievement from a previously unaccredited course or prior certificated learning may apply for APEL. A claim for APEL may be made for up to 50% of the taught credits (i.e. 60 credits) on the MSc Applied Clinical Health Psychology. The responsibility rests with the applicant for making a claim to have acquired knowledge and skill accredited and for supporting the claim with appropriate evidence. The learning derived from experience must be able to be identified in order to be assessed. Prior learning is identified through systematic reflection on experience, the writing of clear statements about what was actually learned and the collection and collation of evidence to support those statements. The claim will be assessed by the programme team and the admissions team. It will be assessed against individual module learning outcomes.

10. Aims of the programme
    The programme aims to:
    • Equip students with an advanced and mature understanding of current concepts, theories and controversies within clinical health and health psychology and psychotherapy
    • Facilitate students’ ability to apply psychological skills, knowledge and values to clinical problems in complex and unpredictable situations using a range of psychological theories
    • Familiarise students with applications of clinical health psychology in a comprehensive range of settings
    • Equip students with advanced research skills covering research design, analysis and dissemination
    • Facilitate students’ development of a range of high level skills, such as practising clinical skills, designing and evaluating interventions and decision-making
    • Facilitate students' development of high level communication skills enabling them to communicate effectively with patients from a variety of cultural and ethnic backgrounds
    • Facilitate students’ development of a range of transferable skills such as numeracy and team-working in order to aid employability
    • Equip students with an ethical and reflective approach to their practice

11. Programme outcomes
    A. Knowledge and understanding
       On completion of this programme the successful student will have knowledge and understanding of:
       1. Psychosocial foundations of health, illness and disease;
       2. Psychological processes of acute and long-term conditions;
       3. Psychological processes of healthcare delivery;
       4. Applications of health psychology;
       Teaching/learning methods
       Students gain knowledge and understanding through interactive lectures and workshops (all outcomes) involving significant learner activity, which allows students to engage with the material and encourages a deep approach to learning.
       Assessment Method
       Students’ knowledge and understanding is assessed by a range of methods including formative assessments.
       Assessment includes essays (outcome 1), health behaviour change reflection (outcome 1), systematic review (outcome 2), case study report (outcome 3), designing and evaluating...
### 5. Counselling and Psychotherapy; 6. Research methods in applied psychology

- Interventions or services (outcomes 4 & 5), research reports and in-class tests (outcome 6)

### B. Cognitive (thinking) skills

**On completion of this programme the successful student will be able to:**

1. Reason analytically;
2. Discuss in-depth issues in clinical health and health psychology by drawing on relevant evidence;
3. Comprehensively and critically evaluate research and theories in clinical health and health psychology;
4. Evaluate research methodology;
5. Make decisions about implementing research and interventions in complex and uncertain environments
6. Reflect in depth on learning and development

**Teaching/learning methods**

Students learn cognitive skills through interactive lectures and workshops (all outcomes) involving significant learner activity, which encourages discussion and debate and encourages critical thinking and a deep approach to learning.

**Assessment Method**

Students’ cognitive skills are assessed by a range of methods including formative assessments. Assessment includes an essay, systematic review and case studies (outcomes 1-4), health behaviour reflection (outcomes 1, 2 & 3), designing and evaluating interventions (inc. two formative, outcomes 3 & 5), research reports (outcomes 1, 3, 4, & 5), reflective log (outcome 6), dissertation (all outcomes)

### C. Practical skills

**On completion of the programme the successful student will be able to:**

1. Plan, conduct and write-up research that addresses important and relevant applied clinical health psychology issues;
2. Analyse quantitative and qualitative data;
3. Design health-related interventions;
4. Critically evaluate interventions or services;
5. Make decisions about patients’ needs and welfare through evidence-based reasoning.
6. Identify and apply clinical skills
7. Take an ethical and reflective approach to their practice

**Teaching/learning methods**

Students learn practical skills through interactive lectures (outcomes 1-5 & 7), research and statistics workshops (outcomes 1, 2 & 4), and professional practice workshops including role play (outcomes 4, 5, 6 & 7). All of these methods will provide opportunities for experiential learning.

**Assessment Method**

Students’ practical skills are assessed by a range of methods including formative assessments. Assessment includes a case study report (outcome 5), designing and evaluating interventions (outcomes 3, 4 & 7), research reports (outcomes 1 & 2), essay and log book (outcome 6), reflective log (outcome 7), dissertation (outcomes 1, 2 & 7)

### D. Graduate Skills

**On completion of this programme the successful student will be able to:**

1. Chart, plan and reflect on their personal and career development;
2. Learn effectively in order to be able to demonstrate mastery of issues in the field of clinical health Psychology;
3. Communicate effectively with peers, tutors and others;
4. Work effectively as part of a team;
5. Use information technology to produce reports, search literature and analyse data;
6. Demonstrate advanced quantitative reasoning skills that are required to research and practice in the field of health psychology
7. Disseminate work through reports, articles, posters and presentations

**Teaching/learning methods**

Students acquire graduate skills through reflective logs (outcome 1 & 2), workshops on communication and other professional and clinical skills (outcomes 1 & 3), statistical workshops (outcomes 5 & 6), and team work (outcomes 3, 4 and 7).

**Assessment Method**

Students’ graduate skills are assessed by a range of methods including formative assessments. Assessment includes research reports (outcomes 5, 6 & 7), poster presentations (outcome 3 & 7), reflective log (outcomes 1 & 2), systematic review (outcomes 3 & 4); dissertation (outcomes 2, 3, 5, 6 & 7)
12. Programme structure (levels, modules, credits and progression requirements)

12.1 Overall structure of the programme

The MSc is assessed at 180 credit points. The programme includes four 30 credit compulsory level 7 taught modules (Research methods in applied psychology, Foundations and applications of health psychology, Psychological processes of illness and health care delivery and Counselling and Psychotherapy), and a compulsory 60 credit level 7 dissertation. In general, 30-credit modules run from October to May.

The MSc programme can be studied over 12 months full-time or 24 months part-time. Part-time students take 60 taught credits in year 1 and 60 taught credits in year 2. In addition, they begin planning their 60-credit dissertation from the outset of their studies and thus this module runs over 24 months for part-time students and over 12 months for full-time students.

All the modules focus specifically on helping students to develop professional, research and graduate skills. These modules help students to develop research skills and prepare them for their dissertation, help them to develop counselling and communication skills, and help them to develop skills in delivering interventions. The dissertation module encourages students to work independently and develop expertise in a particular area of clinical health psychology.

If students are obliged to terminate their studies early, they may apply for the award of Postgraduate Certificate in Applied Clinical Health Psychology, assessed at 60 credit points. If students are obliged to terminate their studies before completion of the dissertation, they may apply for the award of Postgraduate Diploma in Applied Clinical Health Psychology, assessed at no less than 120 credit points. There are no special module requirements for either of these two exit awards.

12.2 Levels and modules

Level 7 (4)
COMPULSORY
Students must take all of the following:

<table>
<thead>
<tr>
<th>Module code</th>
<th>Module name</th>
<th>Credits</th>
</tr>
</thead>
<tbody>
<tr>
<td>PSY4009</td>
<td>Foundations and applications of health psychology</td>
<td>30</td>
</tr>
<tr>
<td>Psy4110</td>
<td>Psychological processes of illness and health care delivery</td>
<td>30</td>
</tr>
<tr>
<td>Psy4012</td>
<td>Research methods in applied psychology</td>
<td>30</td>
</tr>
<tr>
<td>Psy4115</td>
<td>Counselling and Psychotherapy</td>
<td>30</td>
</tr>
<tr>
<td>PSY4035</td>
<td>Research: Practice and Reporting</td>
<td>60</td>
</tr>
</tbody>
</table>

12.3 Non-compensatable modules

13. A curriculum map relating learning outcomes to modules

See Curriculum Map.
14. Information about assessment regulations
Assessment regulations can be found in the University Regulations. All assessment components must be passed.

15. Future careers
The programme supports career development in a variety of ways. The programme itself emphasises the development of graduate skills such as communication, numeracy and team working, as well as subject specific professional skills such as practising clinical skills, designing and evaluating interventions or services and writing research proposals. These skills are all assessed and students are required to reflect on their learning and development.

Visiting external speakers working in the NHS, academia, public health and industry contribute to the programme in order to help students consider their future careers.

Career opportunities in the field of clinical health psychology include health promotion in the workplace, the community or public health; smoking cessation; stress management; the management of chronic illness including pain, cardiovascular disease or HIV; research and teaching. Thus students may work in a variety of settings including the NHS, public health, industry and academia. In addition, post-graduation, students may also pursue further postgraduate training and/or study such as a PhD or gain a certificate in counselling skills and students who have GBC may pursue, for example, training as a Clinical or Counselling Psychologist.

16. Particular support for learning
Significantly research active staff and visiting external speakers working in the NHS, academia, public health and industry contribute to the programme and support effective learning and skills development.

Specific tutorial hours are available with the Programme Leader and the various Module Leaders to support learning on each module and all members of staff can be reached by telephone and e-mail.

The Learning Resources service provides a variety of supports and the Learning Enhancement Team provides support for academic writing and language and maths, stats and numeracy. The Learning Resources Centre also provides computer rooms and loans out laptops. The psychology department has three computer laboratories and a psychophysiology laboratory for psychology students.

Additional support required by disabled students, mature students, overseas students etc. is readily available to ensure that all students enjoy equality of opportunity at Middlesex (e.g. lecture notes can be made available in hard copy as well as on UniHub, assessment feedback can provided by email or in hard copy and/or students can meet with module leaders for verbal feedback).

17. JACS code (or other relevant coding system)  PGC84S
18. Relevant QAA subject benchmark group(s)  None at M-level but H-level QAA psychology subject benchmark statement

Please note programme specifications provide a concise summary of the main features of the programme and the learning outcomes that a typical student might reasonably be expected to achieve if s/he takes full advantage of the learning opportunities that are provided. More detailed information about the programme can be found in the student programme handbook and the University Regulations.
